Understanding Coastal Urban and Peri-urban Indigenous People's vulnerability and adaptive capacity to Climate Change

Indigenous Communities (IC) ARGP Speedtalks

D. Low Choy¹, D. Jones²

¹Griffith University

²Deakin University

This brief presentation will commence to address a number of emerging questions that are underpinned by the current NCCARF research project: Understanding Coastal Urban and Peri-urban Indigenous People's vulnerability and adaptive capacity to Climate Change. In terms of climate change adaptation barriers, options and priorities, what are the major considerations for indigenous communities residing in coastal peri-urban and urban places that may differ from those of their non-indigenous counterparts and possibly from Indigenous communities living away from the coasts? It will speculate on whether these considerations can be addressed through existing planning and management frameworks.
