Subject: Decision on your revised paper - IET Generation, Transmission & Distribution

Dear Dr Md Enamul Haque,

GTD-2020-0937.R1

'An Automatic Network Capacitive Balancing Technique for Resonant Grounded Power Distribution Networks'

Thank you for revising your paper for IET Generation, Transmission & Distribution. I am pleased to accept the paper for publication since the criticisms of the reviewers have now been answered.

The IET now offers authors an Open Access publication option alongside our standard Subscription Access. The standard Subscription Access option involves you assigning copyright to the publisher. If you choose the Open Access option you will retain the copyright for your work by selecting one of four Creative Commons Licences. Please be aware that if you choose an Open Access licence there is an Article Processing Charge (APC) of \$2,000 USD. The APC may be covered by the same funding that you would receive for your research, and some institutions have funding set aside to fund open access publishing. Please see our Author Guide for more information: [IET Digital Library Author Guide](#).

You will be contacted shortly asking you to take a decision and sign either a copyright or Open Access licence form.

Yours sincerely,

Dr Innocent Kamwa
Editor-in-Chief
IET Generation, Transmission & Distribution
