**Subject:** FW: [AJCEB] The effects of the late 2000s global financial crisis on Australia's construction demand

Hi Sandra,

Does this email provide sufficient information? You can see the paper title and journal title are both in the Subject, the authors are recipients, and review outcomes are in the body of the email.

How compact they are!

Thanks  
Chunlu

Reviews for your information

---

Reviewer B

I found the use of the VEC model interesting. Whether it satisfy the final criteria for reviewers: that it should be relevant in 5 years time will obviously depend on how other researchers respond. However, I think it should be accepted subject to some minor editing of grammar.

---

Reviewer C

Not normally a fan of papers on new statistical techniques where a major part of the paper is used to explaining the new technique, but in this case it's well done. The topic of the study is welcome - while there has been some debate about it, the study is timely and very convincing.

The English needs some attention but otherwise it's ready to publish.
